

MiddleOffice 6.2

The beginning of quarter 2 saw the release of Open Print version 6.2. which has enabled users to improve document design with a customised feel. Easy modification reduces turnaround times dramatically, allowing the user to have more control over the production of documents.

Sefas are enthusiastic about the release of 6.2 and the contributions it will have to the product line. Characteristics allow users to perform several activities such as image resizing, improved table management, and dragging and dropping objects, therefore avoiding modification in an external tool. This feature creates user flexibility and increases productivity.

Using MiddleOffice 6.2, Sefas performed their first successful training session demonstrating the new features with DSTI. Darren Collins and Richard Howells presented the three day advanced training course for MiddleOffice with a tailored and interactive course focusing on DSTI requirements. Darren Collins comments that "the latest version of MiddleOffice offers some key productivity benefits. Particularly for an environment managing lots of customer specific fonts, the ability to generate this on-the-fly, for the chosen output format will further speed up time to market for key applications. Coupled with a significantly enhanced interface, this enables companies (such as DSTi) to offer leading-edge on-line design and composition services to its customers. DSTI are now very well placed to push the envelope further."
